

Building & Fire Services Online and Face to Face Training

Do you know what courses we can provide for you?

Building & Fire Services offer many types of Online and Face to Face training courses. Our online courses are easily accessible with a strong internet connection via a laptop, computer, tablet or mobile phone. The courses can be accessed once a login has been provided and the requested course has been selected. In each course, there are module books with videos, audio snips and written material to view. There is also a reference book for the student to download and keep. Most courses have a quiz at the end to ensure the student has learnt and understood the course material. Once the quiz has been completed with a required 95% pass rate, a certificate is generated to state they have completed the course. Every Online course that we have can also be completed Face to Face. Each Face to Face course starts from 2 hours and can be tailored to your specific site, industry and individual needs. The Face to Face courses are designed for interactive learning using a PowerPoint, displays and a work booklet. There is also a practical which gives the students a hands-on approach and helps them get a better understanding of the course - "Getting in and Doing it".

We are constantly developing and expanding the variety of our training courses we can provide to help different industries with their training requirements. Our training course library includes:

- [Fire Extinguisher/Suppression](#)
- [Fire and Emergency Warden](#)
- [Advanced Emergency Management](#)
- [Workplace Safety Awareness](#)
- [Intro to Fire and Safety Systems](#)
- [Industry Specific](#)
- [Specialised Courses](#)
- [Childcare Industry Specific – Emergency Warden](#)

Ask us about how we can create a specialised course to help you with your training requirements!

Confined Spaces/Hazardous Atmospheres

This course covers what a confined space is, the types there are along with the hazards of being in a confined space. This course also covers hazardous atmospheres including toxic substances, corrosive and asphyxiating atmospheres.

Hot Works/Safety Watch

The Hot Works course explains the dangers of completing hot works which could include the use of a grinder, welder, soldering etc. It covers the responsibilities that a person must gain a Hot Works Permit and the responsibilities of a Safety Watch.

Dust Explosions

Covering all aspects and awareness of the possibility of explosions in the workplace and different industries. The course covers housekeeping, extraction systems and design methods to help eliminate dust explosions.

Spill Control

This course outlines the importance of choosing a specific spill kit for your requirements, how to clean up a spill on different surfaces, what items to use when cleaning up the spill and key points to remember when a spill occurs.

If you are interested in discussing this further, we are happy to meet with you and carry out a free, no obligation, fire safety appraisal of your workplace or business
